

Welcome to Orchestration Fundamentals for Agentic Development

Welcome to the **Orchestration Fundamentals for Agentic Development** course! We are excited to have you join us for this hands-on learning experience.

Course Overview

This course is designed for developers, tech leads, and engineers looking to move from single-prompt AI assistance to orchestrating multiple agents on larger tasks. You will practice breaking features into agent-ready units of work, choosing the right model for each task, and running multiple agent sessions in parallel using Claude Code.

Pre-Class Setup

To ensure that we can dive straight into the hands-on labs during our session, we ask that you complete the necessary setup before class begins. The course utilizes a single toolchain stack (Node.js, Git, Claude Code, and a code editor like VS Code).

Please review the installation guide for your operating system:

- 🍏 [macOS Installation Guide](#)
- 🪟 [Windows Installation Guide](#)

(You can also refer to the [Main Setup Document](#) for a complete overview).

Completion Checklist

Please ensure all the following items are checked off before arriving at class:

Task	Command / Instructions	Status
Git	<code>git --version</code> should return a valid version	☐
Node.js	<code>node -v</code> and <code>npm -v</code> should return valid versions	☐
Claude Code	<code>npm install -g @anthropic-ai/claude-code</code>	☐
Claude Authentication	Run <code>claude</code> in your terminal and log in	☐
Code Editor	Visual Studio Code (recommended) installed	☐
