

Welcome to Orchestration Fundamentals for Agentic Development!

To ensure a smooth and productive learning experience, please complete the setup before class.

Course Overview

Review the [course outline](#) for the objectives and schedule.

This is a four-hour course delivered twice in one day to separate morning and afternoon cohorts. You will use Claude Code, Git, Bash 3.2 or later, a standard terminal, and your preferred code editor to plan and coordinate multi-agent development work.

Pre-Class Setup (Required)

Start with the [installation guide](#).

Category	Tool
Version control	Git
Shell	Bash 3.2 or later; Git Bash on Windows
Agentic development	Claude Code with an eligible authenticated account
Editor	Any code editor; Visual Studio Code recommended

Follow the operating-system-specific instructions for macOS or Windows. After installing the tools, open the [verification project](#) and run `bash test-setup/verify.sh` from the repository root.

Checklist Before Class

- ☐ Confirm that your computer meets the operating-system, memory, and internet requirements in the installation guide.
- ☐ Install Git and confirm that `git --version` prints a version.
- ☐ Confirm that `bash --version` reports Bash 3.2 or later.
- ☐ Install Claude Code with the native installer and confirm that `claude --version` prints a version.
- ☐ Run `claude` and complete authentication with the account approved for the course.
- ☐ Install and open your preferred code editor.
- ☐ Run `bash test-setup/verify.sh` from the repository root.
- ☐ Confirm that the test prints `SUCCESS: All required command-line tools are installed.`
